METHODOLOGY

How RFM scoring works

Recency

Days since last purchase

5 = 0–26 days
4 = 27–53 days
3 = 54–103 days
2 = 104–224 days
1 = ≥ 225 days

Frequency

Number of orders

5 = ≥ 10 orders
4 = 8–9 orders
3 = 6–7 orders
2 = 5 orders
1 = ≤ 4 orders

Monetary

Total sales

5 = ≥ 4,283
4 = 2,751 – 4,282
3 = 1,740 – 2,750
2 = 962 – 1,739
1 = ≤ 961

Scores 1–5 use quintiles (20th/40th/60th/80th percentiles); Frequency is rounded up because order counts must be whole numbers. The 125 RFM combinations are mapped to 11 segments. Product/region index = segment share ÷ overall share (>1x = more prominent than average).

SEGMENT 01 / 11

Champions

Buy most often and purchased most recently.

CUSTOMER

RECOMMENDATION

Promos to regain this segment's attention.

CONCLUSION

Three key insights

20.40%

At Risk

Largest revenue contribution despite long recency. Top retention priority.

18.19%

Champions

Only 9.33% of customers, yet a high contribution. Protect their loyalty.

2.9x

Multi-category effect

Potential Loyalist orders with ≥2 sub-categories are worth 405.6 vs 140.7. The data case for bundling.

Budget focus: retain At Risk and Need Attention, protect Champions and Loyal, cross-sell to Potential Loyalist, and run low-cost activation for dormant segments.
